

Simple Shop-Floor Communication That Feeds Better Factory Decisions

FactoryDialog™

Capture Actual Process & Setup Times, As They Happen. Paperless Operator Input with Direct Integration with Backend Databases and ERP.

FactoryDialog is a shop-floor communication and data-capture solution from FactoryTwin. It helps operators easily report what is happening on the floor, and gives supervisors real-time visibility into issues that affect schedules, output, and daily execution.

At its core, FactoryDialog connects people, problems, and decisions.

Purpose-Built for Operators and Supervisors, with Two Intuitive, Easy-to-Use Views

Supervisor View

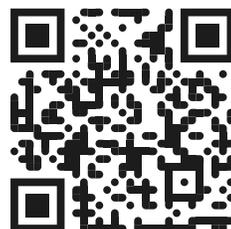

Real-time visibility into time-recording compliance across machines, parts, and shifts. Gives supervisors a live view of shop-floor disruptions, delays, and constraints, enabling faster response and fewer end-of-shift surprises.

Operator View

A simple, guided interface for operators to record actual process and setup times as work happens. Captures real shop-floor conditions as structured data, with minimal clicks and no disruption.
